

Federal Risk and Authorization Management Program

HIGH BASELINE

June 29, 2016 | www.fedramp.gov

HIGH SYSTEM

High impact systems are systems that contain high impact data according to the Federal Information Processing Standard (FIPS) 199.

FIPS 199 categorizes data according to three unique elements

- Confidentiality
- Integrity
- Availability

In simple terms, if any of those elements were impacted, it would pose a severe risk to life, limb, or financial ruin.

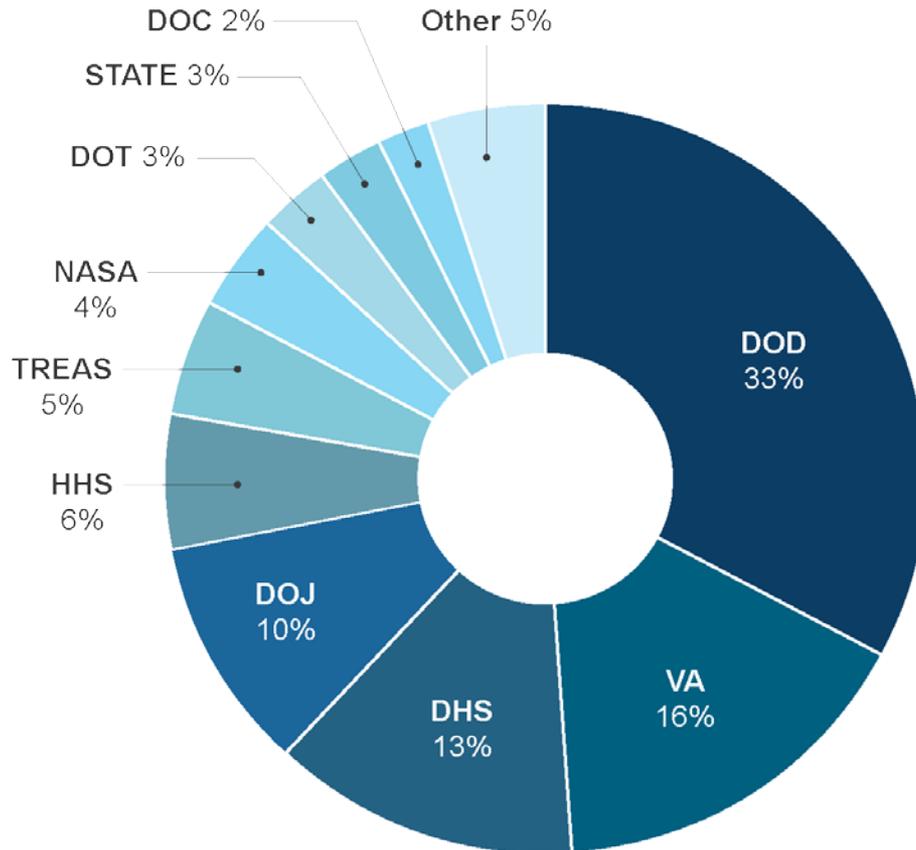

- By definition, this means any impact would have a severe or catastrophic adverse effect on organizational operations, organizational assets, or individuals.

Typical high impact systems include:

- Law enforcement systems
- Health systems
- Financial systems

HIGH BASELINE DEMAND

Interest Across FedRAMP's Stakeholders

- Federal Agencies
- State, Local, Tribal
- NIST
- Cloud Service Providers
- Third-Party Assessment Organizations

Goals of the Pilot

- Determine if the requirements could be implemented by commercial providers
- Ensure requirements weren't academic but based in reality
- Allow agencies to begin using high cloud services immediately upon release of the baseline requirements
- Provide agencies a competitive range of vendors they could begin to use
- Give high system owners the assurance that these systems were secure by validation through the JAB

Criteria for Pilot Services

- Existing FedRAMP authorization
- Government community cloud
- Infrastructure as a Service
- Competitive marketplace

Prioritization of Pilot Services

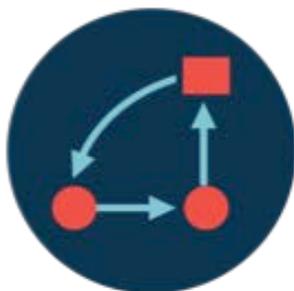

- Existing pilot with a JAB agency
- Existing JAB authorization
- Authorization period greater than one year
- Customer demand
- Quality of continuous monitoring from authorization to present

THE PROCESS

Used the Risk Management Framework (800-37) as applied to low and moderate systems

1. Categorize data
2. Select control
3. Implement
4. Test
5. Authorize
6. Continuously monitor

Only difference is the number of controls and implementations

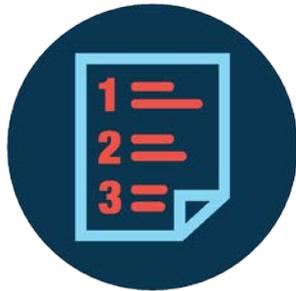

1. **Categorize data** - High impact according to FIPS 199
2. **Select the controls** - New FedRAMP High baseline requirements
3. **Implement** - Implement the totality of the controls in the requirements

In the future, CSPs can use the High Baseline to pursue either JAB P-ATOs or Agency ATOs

- Same process, just looking at additional controls

AUTHORIZED HIGH SYSTEMS

Through this process, we've gotten ATOs for three high systems:

- Microsoft Azure Government IaaS/PaaS
- Amazon Web Services GovCloud IaaS
- Autonomic Resources/CSRA ARC-P IaaS
